PROJECT UNDERTAKEN

PROJECT NAME: DISEASE DETECTION IN PADDY USING MACHINE LEARNING

DESCRIPTION: The goal of the project "Disease Detection in Paddy Using Machine Learning" is to increase agricultural sustainability and productivity. The main goal was to create an intelligent system that could analyse leaf photos and diagnose different diseases in paddy crops. The project included gathering and preprocessing large image datasets and then training models to precisely categorize and predict diseases using machine learning algorithms. Convolutional Neural Networks (CNN) and other techniques were used to guarantee great accuracy and efficiency. This experiment demonstrates how technology may revolutionize conventional farming methods by providing farmers with a dependable instrument to preserve crop health and maximize output.
